

Drishiti Pukia

DOB-28-Mar-2016

Attendance-182 days out of 182 days

Report for 2024-25 (Second term)

INTRODUCTION

Drishiti stays in the hostel and comes to school dressed neatly. She belongs to a joint family with her father, mother, aunt, uncle (kaka), elder brother and elder sister. She is the youngest among her siblings. Her father is a farmer, and her mother is a housewife. Her elder brother, Gupto, studies in Rayagada in seventh standard, while her sister, Srishti, studies in the Receptivity group at the same school as Drishiti. In her spare time, she enjoys working on her activity book, doing math, or colouring. Although she stays in the hostel and is away from her parents, she never cries for home and is responsible enough to wash her clothes herself.

SINGING

Drishiti sits erect in the class and sits very quietly. She sings the songs very nicely but in few of the songs she had difficulty to catch the lines. She loves the song Kisi Ki Muskurahaton Pe very much. She also enjoys the class when action is done.

PROJECTS

Occupation

Drishiti needs to be alert and confident in the group. In this topic she had made a picture of a painter. She had all the information and had to give a presentation but she did not give the presentation on a painter and gave a presentation on a dancer instead. She did it very beautifully. She also showed a dance as she was presenting a dancer. She presented the dance very well, with a lot of confidence.

Water

Drishti explored several aspects of water. She learnt about the importance of saving water, the water cycle, and water pollution. She studied sources and storage of water, as well as the uses of rainwater and the three states of water. Drishti also gained knowledge about fresh and brackish water. She enjoyed making creative drawings of the sources of water and had fun playing with water during her activities.

Birds

Drishti drew the different types of beaks and labelled them. She also made a beautiful nest using dry grass and hanged it on a tree just behind her group, with some grains in it and observed it every day. When she finally saw a bird sitting in the nest, she got very happy. She loved visiting the gardens with her friends and observing the birds through binoculars. She took a keen interest in learning about the birds' habitat and their body parts. She loved watching the videos on the birds and how they made their nests. The most interesting for her was watching the videos on how the mother bird feeds her babies.

Human Body

She was very excited in doing this topic and was very happy to learn about it. She watched many videos on the internal organs and learnt a lot. She needs to be active and alert in the class and listen to what is being explained. When there is a question put to her, she gets nervous about answering it. She made some drawings of the food pipe, which she created very beautifully with a lot of enthusiasm and displayed them on the board.

She also read the Living Science Book-3 and was able to answer some questions.

ENGLISH

Drishti is a very quiet girl. She is very interested in reading and writing. Her communication has improved a lot in English. She has a good concentration and doesn't get distracted very easily. She listens to stories very carefully and answers the questions that are put to her. She has a lot of enthusiasm in writing the English alphabets. She has a very neat and clean handwriting. She reads quiet well in the group. She tries her best to break and read the difficult words that come in the book. She reads slowly with a lot of patience. She always tries to sit erect and do all her

work in the class. She memorises the dialogues very quickly.

MATHS

Drishti needs to get rid of her fear of maths. She needs to concentrate and be attentive while doing maths, especially when a new concept is being taught. Sometimes her body is present, but her mind is wandering. She grasps the concepts gradually. She gets confused in addition and in subtraction. When individually explained, she can do the sums. She can do the two-and-three-digit carryover addition and borrowing of subtraction. After doing the addition if the answer is two-digit number, then

she often writes it together instead of carrying it. But when she is focused, then it's very rare that she makes mistakes. She has learnt the multiplication tables till six and is in a process of learning the table of seven. She is also playing the multiplication games to make it more solid in her brain. Now she is doing her class two book.

HINDI

Drishti loves to listen to stories shared by teachers. Her proactive participation in classroom discussions and her willingness to respond to questions helps her learn. Drishti has shown notable improvement. She has a good reading skill and reads out short stories fluently with correct pronunciation and in a loud voice. She is a little nervous to narrate the story in the classroom. She has learnt writing all the alphabets and her handwriting is very neat and clean. She is able to form sentences using a given word. She has learnt the names of Hindi months and days.

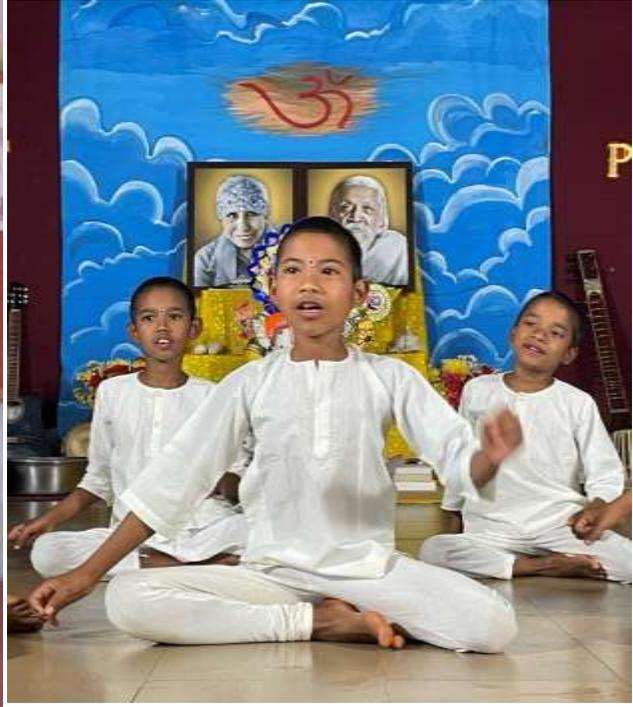

ART

Drishti enjoys drawing and consistently strives to remain quiet in class. She puts effort into making paper folding crafts independently, learning to create a car, ship, hanging lamp, Santa, butterfly with paint and bird. Additionally, she loves colouring and has crafted a Santa to decorate her group with neat precision. Her passion for creativity and discipline in learning highlight her potential as a talented artist.

DANCE

Drishti is passionate and dedicated dancer who enjoys every dance session. She has learned Bhangra and performs its energetic steps with enthusiasm. She has also practiced a Christmas dance which she performed on Christmas day. She also learned a water theme dance which she put more effort to look her movement's grace. She has also learnt a classical fusion. She pays attention in the class and works hard to perfect her steps.

PUZZLES

Drishti is always on time and sits quietly in the class. She likes puzzles class very much. She likes to solve the puzzles of fairies with her friends. She can solve puzzles of about 200 to 500 pieces.
